

Mantax Digitech Caliper

The Digitech Caliper is the perfect choice for storing diameters and heights. The lightweight Digitech is produced in four different lengths and has outstanding communication capacities.

The Mantax Digitech is ideal for many different applications! It is used in such different fields of work as cruising, log measuring, within fishery industry and wildlife management. Its user friendliness combined with outstanding communication possibilities and great reliability makes the Digitech the flexible instrument you need to add value to present and future investments!

Digitech Cruis: the optimal instrument for easy data storage in forest inventory work. Several Digitech units can operate on one working area, transferring results in real time to a field computer, for the most timesaving and accurate inventory ever. The radio signal operates on distances up to 25 meters or 60' (longer distances are possible with the extended antenna).

Up to 8000 registers, including heights transferred with infrared from Vertex or Vertex Laser, can be stored in the Digitech.

Digitech Log: Measuring of logs and timber with up to 2000 registers. The operator sets the desired input such as diameter, length and quality. With the PC-program DigiCom, input logs can be stored in the PC for further processing and calculation.

With extremely low battery consumption and the innovative non-contact measuring system, the Digitech allows you to measure and store data on thousands of objects.

Technical Specification

Measuring areas: 500 mm/650mm/800mm/950mm
– 18", 24", 30", 36"

Weight: 600 g/21 oz (500 mm or 18")

Memory capacity: 8000 registers

Number of tree species or other code: 8 (1-8)

Battery: 1 ea 1.5V AA

Communication: Radio, IR

Consumption: Less than 4mA

Temperature range: -20 to +70 C; -4 to 158F

Programs for Mantax Digitech Caliper available for download of input values to PC or handheld.
